

Amendments to the Claims:

This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) An electronic device comprising:
 - a. a first substantially planar panel including a first interface, the first panel having a first axis of rotation perpendicular to the first panel; and
 - b. a second substantially planar panel including a second interface, the second panel having a second axis of rotation perpendicular to the second panel and rotatably joined to the first panel such that the first axis of rotation and the second axis rotation are co-linear;wherein in a first position the second interface is obscured by the first panel and in a second position the second interface is exposed, further wherein the first panel includes a display configured to respond to the first and second interfaces according to a first and second mode wherein the first and second interfaces operate in the first mode when configured in the first position and operate in a second mode when configured in a second position.
2. (currently amended) The device according to claim 1, wherein the first [panel includes a display,]and second modes are such that when the device is configured in the first position, the first interface controls the display and when the device is configured in the second position the second interface controls the display.
3. (currently amended) The device according to claim 1, wherein the first [panel includes a display,]and second modes are such that when the device is configured in the first position, an entry made on the first interface is displayed on the display, and when the device is configured in the second position, an entry made on the second interface is displayed on the display.
4. (currently amended) The device according to claim 1, wherein the first [panel includes a display,]and second modes are such that when the device is configured in the first position, an entry made on the first interface is displayed on the display, and when the

4 device is configured in the second position, entries made on the first interface and the
5 second interface are displayed on the display.

1 5. (canceled)

1 6. (original) The device according to claim 1, wherein the first panel is operatively coupled
2 to the second panel to allow an exchange of electronic data.

1 7. (original) The device according to claim 1, wherein the device is a portable handheld
2 device.

1 10. (canceled)

1 11. (canceled)

1 12. (canceled)

1 13. (canceled)

1 14. (original) A wireless telecommunications device comprising:

2 a. a first panel including a front side and a back side, wherein the front side further
3 comprises a display and a telephone interface, the first panel having a first axis of
4 rotation;

5 b. a second panel including a keyboard, the second panel having a second axis of
6 rotation, the second panel rotatably coupled to the first panel such that in a first
7 position the keyboard is obscured by the first panel, and in a second position the
8 keyboard is exposed, wherein in the first position an entry made on the telephone
9 interface is displayed on the display and in the second position an entry made on
10 the keyboard is displayed on the display, and

- 11 c. a digital camera lens mounted to a surface of the back side of the first panel, such
12 that in a first position the camera lens is obscured by the second panel, and in a
13 third position the camera lens is exposed.
- 1 15. (original) The wireless telecommunications device according to claim 14, wherein in the
2 second position, entries made on both the keyboard and the telephone interface are
3 displayed on the display.
- 1 16. (original) The wireless telecommunications device according to claim 14, wherein in the
2 third position, the keyboard is obscured.
- 1 17. (original) The wireless telecommunications device according to claim 14, wherein the
2 second panel rotates in a first direction from the first position toward the second position
3 and the third position.
- 1 18. (original) The wireless telecommunications device according to claim 14, wherein the
2 keyboard is a qwerty keyboard.
- 1 19. (original) The wireless telecommunications device according to claim 14, wherein when
2 the device is configured in the second position, the second panel is rotated about 180
3 degrees from the first panel.
- 1 20. (original) The wireless telecommunications device according to claim 14, wherein the
2 second panel rotates in a first direction from the first position toward the second position
3 and in a second direction from the first position toward the third position, wherein the
4 second direction is opposite to the first direction.
- 1 21. (original) The wireless telecommunications device according to claim 14, wherein the
2 device operates in a first mode when configured in the first position, the device operates
3 in a second mode when configured in the second position, and the device operates in a
4 third mode when configured in the third position.

- 1 22. (original) The wireless telecommunications device according to claim 21, wherein the
2 first mode is a telephone mode, the second mode is a keyboard mode, and the third mode
3 is a camera mode.
- 1 23. (original) The wireless telecommunications device according to claim 22, wherein in the
2 third position, a button in the telephone interface is configured to operate a digital camera
3 operatively coupled to the camera lens.
- 1 24. (original) The wireless telecommunications device according to claim 14, wherein in the
2 third mode the display shows what the camera lens sees.
- 1 25. (original) The wireless telecommunications device according to claim 14, wherein the
2 front side of the first panel includes the display and the first interface, and the back side
3 of the first panel includes an engaging end.
- 1 26. (original) The wireless telecommunications device according to claim 25, wherein the
2 second panel further comprises a receiving end.
- 1 27. (original) The wireless telecommunications device according to claim 26, wherein when
2 the device is in one of the first position, the second position, and the third position, the
3 receiving end receives the engaging end.
- 1 28. (original) The wireless telecommunications device according to claim 14, wherein the
2 front side of the first panel includes the display and the first interface, and the back side
3 of the first panel includes a receiving end.
- 1 29. (original) The wireless telecommunications device according to claim 28, wherein the
2 second panel further comprises an engaging end.
- 1 30. (original) The wireless telecommunications device according to claim 29, wherein when
2 the device is in one of the first position, the second position, and the third position, the
 receiving end receives the engaging end.

- 1 31. (new) An electronic device comprising:
2 a. a first substantially planar panel including a first interface, the first interface
3 comprising a telephone interface, the first panel having a first axis of rotation
4 perpendicular to the first panel; and
5 b. a second substantially planar panel including a second interface, the second
6 interface comprising a keyboard interface, the second panel having a second axis
7 of rotation perpendicular to the second panel and rotatably joined to the first panel
8 such that the first axis of rotation and the second axis rotation are co-linear;
9 wherein in a first position the second interface is obscured by the first panel and in a
10 second position the second interface is exposed.
- 1 32. (new) The device according to claim 31, wherein the first panel includes a display such
2 that when the device is configured in the first position, the first interface controls the
3 display and when the device is configured in the second position the second interface
4 controls the display.
- 1 33. (new) The device according to claim 31, wherein the first panel includes a display such
2 that when the device is configured in the first position, an entry made on the first interface
3 is displayed on the display, and when the device is configured in the second position, an
4 entry made on the second interface is displayed on the display.
- 1 34. (new) The device according to claim 31, wherein the first panel includes a display such
2 that when the device is configured in the first position, an entry made on the first interface
3 is displayed on the display, and when the device is configured in the second position,
4 entries made on the first interface and the second interface are displayed on the display.
- 1 35. (new) The device according to claim 31, wherein the first panel is operatively coupled to
2 the second panel to allow an exchange of electronic data.
- 1 36. (new) The device according to claim 31, wherein the device is a portable handheld
2 device.
